EQVs present an estimate of fair cash value of all taxable property in each city and town as of January 1 of each year (MGL CH. 58, Sections 9 & 10C). The EQV is a measure of the relative property wealth in each municipality. Its purpose is to allow for comparisons of municipal property values at one point in time, adjusting for differences in local assessing practices and revaluation schedules. EQVs have historically been used as a variable in the allocation of certain state aid distributions, the calculation of various state and county assessments to municipalities, and the determination of municipal debt limits. EQVs

are used in some distribution formulas so that communities with lower property values receive proportionately more aid than those with higher property values. In some assessment formulas they are used so that those with lower property values assume proportionately less of the cost than communities with higher property values. The local aid receipt programs using EQV are: Public Libraries, Chapter 70, and School Construction Aid. The assessments using EQV are: Boston's Metropolitan Transit Districts, the Count Tax, Mosquito Control Projects and Air Pollution Control Districts. A municipality's annual EQV is the sum of estimated fair market value for each property class plus an estimate of new growth, resulting in values indicative of January 1.
